GitHub | Portfolio | Location: Giza – Cairo, Egypt | Military Status: Completed

Profile

Backend Developer specialized in building and enhancing **scalable server-side applications** using **PHP** and **Laravel Framework**. Experienced in developing **RESTful APIs**, **database design (MySQL, Eloquent ORM)**, and **system integrations** with a strong focus on **performance**, **clean code**, and **security best practices**. Skilled in **MVC architecture**, **OOP**, and **API development**. Adept at collaborating within **Agile teams**, **debugging**, and delivering **maintainable backend solutions**. Additionally, familiar with **frontend development** using **Angular** for seamless **full-stack integration**.

Education

Bachelor of Computers and Information (Information Systems Major) 09/2019 – 07/2023
Assiut University – Assiut, Egypt **Education – Graduation Certificate** [↗](#)

Professional Experience

PHP / Laravel & WordPress Back-End Developer – X bees 12/2025 – Present

- Developed and maintained back-end applications using **PHP** and **Laravel**
- Built and maintained WordPress projects
- Built and consumed **RESTful APIs**
- Worked with **MySQL databases** and optimized complex queries
- Improved application performance and fixed bugs
- Integrated back-end services with front-end components
- Used **Git** for version control and team collaboration

ITI (Information Technology Institute) – Assiut Branch - Intern 07/2025 – 11/2025
Completed The Full Stack Web Development (PHP/Laravel & Angular)
– Intensive Code Camp **ITI Certificate** [↗](#)

Skills

- **Backend** : PHP (Core & Advanced), Laravel, Node.js, RESTful APIs, WordPress (CMS)
- **Database** : MySQL, Database Design, Query Optimization, Eloquent ORM, Migrations & Seeders
- **Frontend** : HTML5, CSS3, JavaScript (ES6+), TypeScript, Angular (Components, Services, RxJS), Bootstrap, jQuery, Responsive Design
- **Tools** : Git, Docker, Apache Web Server, Linux (Ubuntu), Postman, XAMPP
- **Other** : Unit Testing, UX/UI Principles, Network & Cyber Security, Red Hat SysAdmin 1, OS Fundamentals

Projects

AqrGate – Real Estate Web Platform - production [↗](#) 12/2025 - 02/2026

Technology: PHP (Native), MySQL, HTML, CSS, JavaScript

Developed a real estate platform using **native PHP**, including backend business logic, database-driven property management, and **integration with Nafath.sa and Rega.sa APIs** for identity verification and real estate regulatory compliance.

Live: [\[Link Website \]](#) [↗](#)

Project: “Tawsila” – Carpooling Web Application [↗](#) 09/2025 - 11/2025

Description: Full-stack Ride-sharing web platform connecting car owners and passengers to reduce traffic and travel costs.,

Technologies: PHP, Laravel, Angular, MySQL, RESTful APIs, JWT Authentication

Key Features: User secure authentication, trip matching, rating system, AI-based ride recommendation, and secure payment integration system.

Role: Full Stack Developer

Contribution: Designed an optimized database schema (improved query performance by **15%**), built RESTful APIs (reduced response time by **10%**) and integrated backend with Angular seamlessly.

GitHub: [Tawsila Repository](#) [↗](#)

Project: Theatre Booking System – Online Ticket Booking 08/2025 - 09/2025

Description: Full-stack web app for online theatre ticket booking with seat management and additional services.

Technologies: PHP, Laravel, Angular, Local Storage

Key Features: User/Admin login, real-time seat availability, online booking & cancellation, cost calculation, optional add-ons.

Role: Full Stack Developer

GitHub : [Backend Theatre Repository](#) – Laravel APIs, booking & auth logic

GitHub : [Frontend Theatre Repository](#) – Angular UI, seat selection & admin dashboard

Project: “OneTech” – E-commerce (PHP-Laravel) Web Application

07/2025 - 09/2025

Description: Full-stack e-commerce platform with admin panel for managing products, orders, and users, featuring secure payment integration.

Technologies: PHP, Laravel, Migrations & Seeders, API Integration.

Key Features: Payment gateways, cart logic, analytics dashboard, best sales, recent products .

Role: Back-End Developer

Contribution: Implemented secure business logic (reduced validation bugs by **25%**), integrated payment APIs (improved checkout success rate by **15%**) and built analytics dashboard for product insights.

GitHub: [OneTech Repository](#)

Project: “Library Management System” – PHP Native Web Application

06/2025 - 07/2025

Description: A simple web-based system for managing books, members, and borrowing/return operations.

Technologies: PHP (Native), MySQL, HTML, CSS, JavaScript

Key Features: Manage books, categories, and members, Borrow/return workflow, Search & filter books, Basic admin authentication

Role: Back-End Developer

GitHub: [Library Management System Repository](#)

Soft Skills

Problem-Solving, Communication Skills, Presentation Skills, Time Management, Team Collaboration, Adaptability & Fast Learning

Languages

Arabic (Native), English (Intermediate – B1)
